

Denis Hlinka, MSc.

Senior Data Engineer with passion for AI

Senior Data Engineer/Data Architect with 5+ years delivering production data platforms and analytics products end-to-end—primarily on Azure, with multi-cloud exposure (AWS/GCP). Strong DataOps mindset: CI/CD, IaC (Terraform), automated testing, and pragmatic architecture that ships. Recently expanding into GenAI/agentic automation—building LangChain/LangGraph agents and running/fine-tuning local open-source LLMs to accelerate delivery, knowledge workflows, and operational automation.

WORK EXPERIENCE

Revolt BI *07/2024 – Present*
Technical Lead / Senior Data Engineer / External Consultant
Prague

Achievements/Tasks

- Technical lead and architectural decision maker on Snowflake + Azure data warehouse programs (ADF, Azure Functions, Azure SQL), from requirements to production rollout
- Designed robust ingestion patterns (batch/incremental), data modeling standards, and reusable dbt frameworks (macros, tests, documentation) for scalable delivery
- Owned DataOps/CI/CD: automated deployments and environment promotion for Snowflake/dbt using Azure DevOps pipelines; improved reliability with validation gates and standardized releases
- Built pragmatic automation in Python/Bash/PowerShell (API integrations, CLI tooling, operational scripts) to reduce manual effort and speed up troubleshooting
- Built schema evolution tool to process data from D365 Finance & Operations module utilizing the SynapseLink extract
- Designed a release & versioning process based on Semantic Versioning 2.0.0

Billigence *11/2025 – Present*
Senior Data Consultant
Prague

Achievements/Tasks

- Led feasibility study for migrating Excel-heavy business-critical processes into a scalable data-platform solution using Snowflake + Streamlit
- Ran stakeholder workshops; decomposed end-to-end process into steps, rules, exceptions, controls, and ownership; produced high-fidelity process/dataflow diagrams to align business and engineering
- Drafted target-state architecture blueprint and implementation options (data flows, integration touchpoints, logical layers, governance/auditability)

PwC *09/2021 – 07/2024*
Senior Solution Architect
Prague

Achievements/Tasks

- Designed and implemented complex cloud and on-prem data platforms; authored architecture blueprints, implementation plans, and operational runbooks
- Built ETL/ELT in Databricks (PySpark, Spark SQL, Delta / Delta Live Tables) and Snowflake; delivered performant table designs and curated marts for BI

SKILLS

LLM Orchestration & Agentic Engineering (LangChain, LangGraph, tool use, planner-executor, cooperative agents, routing)	CI/CD & IaC (Terraform/Terragrunt, Azure DevOps)
RAG / CAG Architecture (chunking strategies, embeddings, vector stores, relevance tuning, grounding & citation)	Apache Spark / Databricks (PySpark, Delta, Delta Live Tables)
Prompt Engineering & Template Design (reusable prompt templates, orchestration primitives, evaluation hooks)	Snowflake (advanced)
API & Integration Design (API contracts, idempotency patterns, error-handling, auth models, eventing & message flows)	dbt (macros, tests, documentation, model patterns)
Docker	Linux + Bash / PowerShell
Solution Architecture & Data Modelling	Business Analysis (requirements → technical design)
Python (pandas, pydantic, pyarrow, requests, pytest; scripting & APIs)	Serverless Functions (Azure Function Apps incl. Durable Functions)
SQL (analytics engineering, optimization, warehouse patterns)	Git (branching strategies, code review, collaboration)
Cloud Computing (Azure primary; AWS/GCP working knowledge)	Consulting

EDUCATION

MSc. Computer Engineering
Aarhus University
08/2019 – 06/2021 *Aarhus, Denmark*

BEng. Software Engineering
VIA University (incl. internship abroad)
07/2015 – 06/2019 *Horsens, Denmark*

LANGUAGES

English	<i>Native or Bilingual</i>
Slovak	<i>Native or Bilingual</i>

- Implemented CI/CD for data solutions (Azure DevOps), plus IaC with Terraform for repeatable infrastructure deployments
- Created production-grade dbt components (macros, standard model patterns, tests) to improve consistency across teams and accelerate new delivery
- Delivered Databricks pipelines (PySpark, Spark SQL, Delta/Delta Live Tables), built API control layer on top of Databricks API

ACHIEVEMENTS

Successful WhereScape to dbt Migration (EnBW, Germany) (01/2022 – 04/2023)

Enterprise DW modernization: accelerated WhereScape → dbt migration by implementing production-grade dbt transformations, reusable macros, and testing standards to stabilize and scale ELT delivery, which ultimately led to further cooperation between PwC & EnBW.

Layered Data Warehouse Delivery — Mountfield

Successful turnaround of a high-risk data warehouse engagement under unfavorable contract terms: restored delivery control and delivered a fully-fledged multi-layer platform (raw/staging/core/marts) on Snowflake + Azure with dbt-based transformations, quality checks, and release discipline—resulting in stakeholder confidence recovery and conversion to a T&M contract.

ČEZ Analytics Platform Selection POC

Co-authored EDW architecture blueprints and ran a Synapse vs Databricks POC to support enterprise analytics platform selection and roadmap.
